BY & FOR BREEDERS

150+ HIGH-PERFORMANCE FEEDS

for birds, rodents and rabbits: well-balanced, nutritious mixes, ready-to-use egg food and soft food, mono-component products.

ALWAYS IN THE WINNING FOOD!

Witte Molen is really at the top of their game with the Witte Molen EXPERT range.

Over 150 carefully designed items created by breeders for breeders to help you to achieve top results with your birds or rodents. An excellent range which is sure to include everything you could possibly need for healthy animals and successful breeding.

BY BREEDERS & FOR BREEDERS

If you are a breeder looking for top results, you can't do better than using EXPERT feed alongside your own specific methods.

The base feed is always perfectly balanced, the egg feed and soft feeds are top-quality and there is an excellent selection of mono-component products in the EXPERT ONE range. These feeds, teamed with your knowledge and experience, ensure that your animals will be glowing with health and will always be champions.

That's why champion breeders use Witte Molen EXPERT as part of their winning formula.

WORLD CHAMPIONSHIPS:
28 GOLD MEDALS,
21 SILVER MEDALS,
22 BRONZE MEDALS

XCODE

There is an XCODE on all packaging to help you to find the right product for you. Regardless of the size of the package, the XCODE will tell you exactly what the contents are. This ensures that you will have no trouble finding what you are looking for quickly.

JOHN ROSSOU, RENOWNED BREEDER AND MULTIPLE-TIMES WORLD CHAMPION FRILLED CANARIES
WWW.JOHNROSSOU.NL

For me, Witte Molen is the best source of bird products! Thanks to the consistent, balanced composition of the food, coupled with the use of top-quality raw materials, my birds can perform alongside the best in the world!

BIRD FEED BASICS

PARROTS

For most parrots, a parrot seed mix is an excellent base feed. Something which many people forget - but which is absolutely essential - is to also offer parrots fresh fruit and vegetables.

They also need some egg food or soft food on a regular basis and they should always have unlimited access to grit.

LARGE PARAKEETS

For most parakeets, a seed mix for large parakeets is an excellent base feed. Something which many people forget - but which is absolutely essential - is to also offer them fresh fruit and vegetables.

They also need some egg food or soft food on a regular basis. They love millet, and should always have unlimited access to grit.

AGAPORNIDS

Agapornids should be given a good seed mix which is especially for agapornids. This mix should include buckwheat and paddy rice.

Just like other birds, agapornids also need grit. This is very important for their digestive system. They should also be given some egg food or soft food, some millet and some fresh vegetables or fruit each day.

PARAKEETS

A good quality seed mix is an excellent choice for budgerigars. Make sure that the mix contains vitamins and minerals. Alternatively, your birds can get the vitamins or minerals they need from egg food or soft food.

They must always have access to grit. You should also offer them some millet and fresh vegetables or fruit now and again.

CANARIES

Canaries are not usually picky eaters. An ideal mix for canaries should contain a variety of seeds, vitamins, minerals and grit. Don't give them too much in one go, or they will only eat the tastiest seeds.

It is also a good idea to regularly offer your canary a piece of fresh vegetable or fruit.

TROPICAL BIRDS

A seed mix for these small birds should contain a variety of small seeds and makes a good base feed for most types of tropical bird.

They should also be given some egg food or soft food and some grit. Most types of tropical birds also enjoy a piece of vegetable or fruit.

EUROPEAN BIRDS

A mix of seeds is an excellent base food for European birds. Make sure you choose a good quality mix which is suitable for the type of bird you keep.

There are also special egg foods and soft foods for these birds which include insects and/or fruits, which are an important part of their diet. Fresh food can also sometimes be offered, depending on the variety of bird.

FRUIT-EATING BIRDS

Most fruit-eating birds come from warm continents. They mainly eat fruit, vegetables and insects. It is very important that they do not consume too much iron.

Most fruit-eating birds don't only eat fruit - they will also enjoy a serving of insects and some egg food or soft food, especially during the breeding season.

PARROTS

SPECIALIST COMPOSITION

Performance-oriented composition developed by experienced nutrition experts

NUTRIENT-RICH INGREDIENTS

Free from low-nutrient fillers, full of high quality ingredients, thoroughly cleaned and rich in nutrients

BALANCED FEED

Based on the nutrition requirements of parrots and their natural diet

Choose Witte Molen EXPERT if you want to get top results from your parrots. Explore our range of EXPERT seed mixes for parrots on these pages.

EXPERT PREMIUM PARROTS COARSE

Top quality complete feed for parrots with an average fat content for macaws and African Greys

JAAK STERCKX (BELGIUM)
CHAIRMAN OF "DE GOUDVINK ZELE"

I was introduced to Witte Molen products many years ago when they were recommended to me by a number of members of our local bird club. I breed various types of parrot, and I can always find everything I need within Witte Molen's wide range of breed-specific products.

SPECIALIST IN MOIST EGG FOOD

The Witte Molen selection contains a great variety of ready-to-use egg food, soft universal food and soft food with insects and fruit for all types of ornamental bird. The range contains both universal and specific feeds.

Witte Molen's champion product is the world-renowned moist egg food. This much-loved recipe is very tasty and well-received by various types of bird. What's more, it is ready-to-eat, so it can be offered to your birds straight from the packet or mixed with fruit, seeds, or other tasty treats as you wish.

Thanks to Witte Molen's huge arsenal of nutritional and production knowledge, you can be assured that our products are trustworthy and healthy for your birds. Witte Molen's well-balanced egg foods and soft foods are highly nutritious and are created with a firm focus on the requirements of the animals. As well as protein, which is always carefully measured, Witte Molen egg food also contains all the essential vitamins, trace elements and minerals.

That's why Witte Molen is so highly-rated by bird-lovers all over the world!

NEXT GENERATION FUTURE FORMULA

As well as Witte Molen's "Original" egg food and universal food, the EXPERT range also includes a "Next Generation" version.

This evolved formula is free from artificial aromas, colourants and flavourings and helps to promote good digestion thanks to the addition of brewer's yeast and probiotics. It also has a higher protein content and has an even higher acceptance among birds.

Whether you opt for the "Original" version or decide to join the "Next Generation", at Witte Molen we are always at the top of our game!

Recent investments have ensured that we can produce high volumes efficiently whilst conforming to the highest food safety standards. These new technologies allow Witte Molen to produce more food, more quickly, whilst maintaining a constantly high level of quality. This fits in with Witte Molen's ambitions for sustainable growth within the global egg food sector.

All egg foods and soft foods are available in attractive, contemporary packaging and in various formats, ensuring that both large-scale and small-scale consumers have the chance to offer their birds Witte Molen egg food and soft food. The food is packaged in a protected atmosphere thanks to our advanced packaging machinery. This ensures that the products stay fresh for longer and guarantees optimal nutritional value.

RABBIT AND RODENT FOOD BASICS

RABBITS

Rabbits are plant-eaters. As well as a complete feed (offer around 20-25g per kg of body weight per day), they should also always have access to hay. Hay is easy to digest and high in fibre. They should also always have access to unlimited fresh water.

A complete dry food is a good idea as it ensures that they receive all the nutrients they need. Make sure they always eat the entire contents of their food bowl so you can be sure that they are getting all the important nutrients.

Rabbits love fresh vegetables. A daily selection of a variety of vegetables is an excellent addition to their base feed. It is important not to offer too much volume, but equally essential that they receive a good variety.

GUINEA PIGS

Guinea pigs cannot make their own vitamin C, so it is important that they receive extra Vitamin C through their diet. They are real plant-eaters, so make sure that they receive a good dry feed with added vitamin C as well as hay and fresh vegetables.

Make sure they have finished all the food in their dish before you offer them anything else; this way you can be sure they receive all the necessary nutrients. A guinea pig should eat 35 – 50 grams of dried food per day. They should also always have access to fresh water.

Guinea pigs develop likes and dislikes for different ingredients quite early on in life. So make sure you offer them a good variety of foods from an early age.

CHINCHILLAS

Chinchillas come from a part of the world where there is very little nutritious food growing. So their natural diet is high in fibre and low in nutrients. That is why chinchilla base feed is quite plain and should be supplemented with plenty of hay.

They may also be given small amounts of vegetable, ideally dried. Be careful with fruits and high-sugar products, which are not ideal for chinchillas, except for dried rose hips, which are allowed. Ensure they always have fresh drinking water.

DEGUS

Degus, like chinchillas, come from dry areas where energy-rich food is scarce. Their digestive systems are adapted for this environment, so it is important that they do not eat rich foods.

Offer them a good dry food for chinchillas or degus as a base feed as well as unlimited hay. They can also have a small amount of dried vegetable now and again. Do not offer them fruit or high-sugar products as they are susceptible to diabetes. They should also be given fresh drinking water each day, even though they only drink a small amount.

GERBILS

In the wild, gerbils eat mainly seeds, roots and stalks. A good gerbil food should contain seeds and not too many high-sugar products. Gerbils also eat insects, so their diet should also contain some animal protein.

As well as offering them special gerbil food, they can also be given small amounts of vegetable (make sure there is not too much moisture in them). Gerbils are desert animals and drink very little, getting most of the liquid they need from their food. However, it is still important to give them fresh drinking water each day.

HAMSTERS

All types of hamster need animal protein to stay healthy. In their natural habitat, they get protein from insects. Make sure that your hamsters eat all the food in their bowl. Provide around 15g of food per hamster per day (this can vary depending on the animal).

It is very important to offer hamsters unlimited access to fresh water. Check drinking bottles regularly to ensure that they are not blocked. In the wild, hamsters often do not have enough to eat. That is why they stuff food into their pouches and hide food supplies. Even though domestic hamsters always have enough to eat, they never lose their natural instinct to store food. These food stores can rot, so it is a good idea to remove them regularly and to decrease the amount of food you offer your hamsters.

RATS

Rats are very easy to feed as they are naturally opportunistic omnivores. This means that they may also be given small amounts of animal protein – though this is less important for rats than it is for hamsters.

Buy a feed which is specially developed for rats so you can be sure that your rat is receiving all the nutrients it needs and do not offer too much high-fat food – rats can easily become overweight. Make sure you also offer your rats a wide selection of fresh vegetables and fruit, which is excellent for their health, and always remember to give them fresh water every day.

MICE

Mice – just like rats – are opportunistic omnivores, so they are very easy to feed. This also means that they may be given small amounts of animal protein. An ideal menu for mice consists of a variety of seeds, grains and vegetables, as well as some vitamin pellets. Make sure they eat everything up, so that you can be confident that they are getting all the nutrients they require. It is important that they always have food available – mice have a fast metabolism, which means they need food and energy regularly. They should also be given fresh drinking water each day.

SQUIRRELS

Squirrels are not picky eaters, but make sure that they get plenty of variety. An ideal menu for a squirrel is a varied selection of seeds, nuts, fruit and vegetables, as well as some vitamin pellets. Make sure they eat everything up, so that you can be confident that they are getting all the nutrients they require.

Make sure that squirrels are only given fruits which are suitable for their species. Tropical squirrels may have all types of fruit, whereas squirrels originating from colder climates should be offered mainly hard fruit such as apples and pears, or they will develop stomach problems. You should also offer squirrels nuts such as hazelnuts as well as twigs to chew on – this helps to keep their teeth healthy. Give them fresh drinking water daily.

MONO-COMPONENT BASICS

SUNFLOWER SEEDS

Sunflower seeds (*Helianthus annuus*) are available in various colours – white, grey-striped, black-striped and black. They are very high in fat, so they should never be given as the main feed. Be especially careful with parrots, who tend to overeat if they are offered too many. An excess of sunflower seeds can lead to loss of feathers and obesity.

MEALWORMS

Mealworms (*Tenebrio molitor*) are not in fact worms, but the larvae of the mealworm beetle. They are an excellent protein-rich addition to a bird's diet throughout the year. They are not only suitable for birds – they can also be eaten by amphibians, reptiles and fish.

HEMP SEED

Hemp seed (*Cannabis sativa*) is an annual herbaceous plant. Its seeds make an excellent bird feed. It is low in fat, contains nutritious protein, and cystine and tyrosine are not present in its amino acid pattern. The protein contains a maximum of 7.7% leucine and 6.3% valine. It is thought that it encourages birds to mate, though this should not be taken too literally. However, crushed hemp seed is certainly an ideal concentrated feed for young birds.

SAFFLOWER

Safflower (*Carthamus tinctorius*) comes from a thistle-like plant with yellow/red flowers. It is an essential part of a balanced diet for large parakeets or doves. Cardamom is high in fat. The amino acid pattern is especially favourable due to the relatively high arginine content.

MILLET

Bird-experts believe that there are differences between different millets – for example, Senegalese millet, spray millet, white millet and red millet. There is no scientific proof of this – they all belong to the 'Gramineae' (grass) family. Millet is low in fat and high in starch. The amino acid pattern in the protein is especially rich in leucine (11.5%).

There is also soft millet and hard millet. However, contrary to popular belief, the colour of the millet does not affect this. French white millet, which comes from Australia, is very soft, whereas white millet from North America is much harder. Hard millets are suitable for crooked beaks. Tropical birds, especially small ones, will be more suited to smaller, softer varieties of millet.

NIGER SEED

Niger seed (*Guizotia abyssinica*) is mainly cultivated in India and Ethiopia. It is a weed-like plant, with flowers and seed-formation similar to that of the thistle. Niger seed has a particularly high fat content. The seed, when pressed, releases a valuable, neutral oil.

Niger seed is popular with most birds. For this reason, it is also commonly used by bird enthusiasts to feed their birds. Niger seed has an excellent amino acid pattern and is one of the few bird seeds to contain calcium, phosphorus and manganese.

TURNIP SEED

Turnip seed (*Brassica rapa oleifera*) and rapeseed (*Brassica napus*) are difficult to distinguish from each other. The differences lie mainly in their size and colour. Rapeseed is coarse and a dark, almost black colour. Turnip seed has a smaller grain and is dark brown to reddish-brown in colour.

Turnip seed has a sweet, walnut-like flavour, while rapeseed has a sharper taste and can sometimes be rather bitter. Turnip seed and rapeseed both have a high fat-content, which is why they have always been considered an ideal food for canaries. Nutritionally speaking, there is no difference between the two, however rapeseed is less popular amongst canary enthusiasts.

CANARY SEED

Canary grass (*Phalaris canariensis*) or canary seed is a small grain variety with a brown seed kernel. Canary seed is rich in carbohydrates. Its amino acid pattern does not contain cystine but is rich in leucine and arginine.

PEANUTS

Peanuts (*Arachis hypogaea*) are in fact not nuts at all but pulses. They are high in both fat and protein and are often used for feeding wild birds. During the breeding season it is best to offer peanuts broken up so that young birds do not risk choking. They should also be given in small amounts so that they do not become mouldy.

Choose Witte Molen EXPERT if you want to get top results. Take a look at these pages for a wide range of top quality raw materials and single variety seeds which you can combine to create your own personal mix.

Eating a healthy, responsible diet is important for all of us, including the animals which we love and care for.

That is why Witte Molen is dedicated to ensuring the wellness of animals and those who care for them. We do this by developing, producing and selling easy-to-use, innovative, top-quality feeding and care products for ornamental birds, rabbits and rodents, garden birds, doves and poultry.

In order to achieve this, we work closely with professional trade partners, breeders and end-users to be sure all of our products meet all their needs and requirements. Thanks to our collaborations with professional breeders, Witte Molen is one of the leading producers of bird and rodent feed in Europe – Witte Molen Egg Food Moist, for example, is a world-renowned product. That is why Witte Molen is a household name for many European, Asian and South American animal enthusiasts.

The 5 key values of Witte Molen

In order to catch the wind and to work properly, every windmill needs four good blades and a strong axis to hold everything together.

THE AXIS - WORKING TOGETHER

We are strong believers in the power of cooperation with our stakeholders. We work together in order to realise our common goals in the long term. This creates trust, allows us to share our knowledge with each other and results in a continual stream of improvements which benefits everyone in our network.

EXPERIENCE

There is a huge arsenal of nutritional and production knowledge at the basis of our business, thanks to our roots in trade and our many years of experience in animal feed production.

INVENTIVENESS

We are a team of inventive problem-solvers. Our people are dedicated to combining their various insights to create products which are sure to comprehensively meet the needs of animals in a unique way.

QUALITY

We offer you products which you can rely on – we refuse to make any compromises when it comes to the quality of our raw materials and their nutritional composition.

DEDICATION

'Impossible' is simply not in our dictionary. We aim high and we are determined to achieve perfection wherever we can.

PART OF
LAROY GROUP

Witte Molen has been part of the Laroy Group since 2013. This international family business, which originated in Belgium, produces and distributes pet products for a wide range of animals.
